SCISSOR CLAMP LIFTERS

If you operate within the landscaping industry and are involved in bidding for concrete sleeper walls or the construction of retaining walls, you will quickly recognize the indispensable utility of the Aardwolf Scissor Lifters.

Aardwolf boasts a line-up of five distinct scissor lifter models, each catering to a grip range spanning from 0mm to an impressive 450mm. It is imperative to note that all these models encompass our genuine auto-lock feature, setting them apart from others that falsely label a manual locking mechanism as automatic. Additionally, every one of our scissor lifters is meticulously coated with high-visibility safety yellow paint, enhancing their visibility and safety in operational contexts.

If the Aardwolf Scissor Lifters do not align precisely with your specific requirements, rest assured that Aardwolf offers an extensive assortment of alternative lifting clamps and equipment. Among these offerings, the renowned Aardwolf Slab Lifting clamps stand out, having been both invented and patented by the visionary founder of Aardwolf Industries LLC, Mr. James Corbett, nearly three decades ago.

Aardwolf boasts a rich history and a record of excellence that sets us apart from relatively recent entrants in the industry, establishing our legacy as an industry pioneer.

The smart choice

HORIZONTAL STONE LIFTING CLAMPS

Handling and maneuvering concrete blocks and natural stones demand a specialized approach, and our advanced, durable clamps are engineered precisely for this purpose. These robust clamps are suitable for integrating various lifting apparatuses such as cranes or forklift booms, ensuring versatility across different operational needs. The high-friction rubber pads are designed for longevity and replaceability, offering continual protection for load surfaces from potential damage and maintaining the integrity of the moved materials.

The functionality of the clamps is further enhanced by their gravity-powered operational mechanics, ensuring that the clamp jaws are responsive and intuitive. They are designed to automatically engage and release, opening on one lift and securely clamping down on the next, a feature that significantly streamlines the workflow.

VERSA BLOCK CLAMPS

The Versa Block Clamps are versatile lifting tool, expertly designed to move various items, including concrete blocks, rubber tyres, drums, and more. It features adjustable sliding pads, customizable to accommodate objects of different widths. These pads are securely locked into place with a latch on each side, ensuring stability during lifting.

What sets the Versa Block Clamps apart is its adaptability for multiple purposes. It can be fitted with various jaws, making it suitable for grasping various materials. This flexibility is enhanced by the ease with which these jaws can be changed or reversed, allowing the clamp to pick up objects from their exterior surface or from within, adapting to the specific handling requirement of the task.
